Press release November 17, 2011

Prevas gets order from STULZ in Germany

STULZ GmbH Klimatechnik has decided to replace the current controller system for their professional air conditioning system. Prevas has been selected to fill the order and to deliver a new high tech system in the course of 2012.

The new controller system will be designed with the newest technology and will be used as a common platform for all STULZ's air conditioning systems worldwide. The controller system will have many new features and will set new standards in the close control market.

Prevas will deliver a full scale controller system, which will include project management, mechanics, hardware, software and test systems. This will allow for mass production of the controllers.

"Prevas was chosen as our preferred supplier because of their technical skills, the short distance to the development team in Denmark, and the ability to make a full system delivery including project management, mechanics, hardware and software," says Thomas Rentz, Head of Central Buying at STULZ GmbH Klimatechnik.

"We are very happy to have won the order from STULZ in Germany. The order proves that our decision to intensify the focus in the German market was correct. We are looking forward to working together with STULZ and making a world class product we all can be proud of," says Henrik Møller, President at Prevas A/S.

About Prevas

With cutting edge expertise in embedded systems and industrial IT, Prevas contributes by providing innovations that create growth. Prevas was founded in 1985 and is the main supplier and development partner to leading companies in industries such as life science, telecommunications, vehicle, defense, energy and engineering. Offices are located in Sweden, Denmark, Norway, the United Arab Emirates and India. The company has just over 500 employees. Prevas has been listed on the NASDAQ OMX Nordic Exchange in Stockholm since 1998. For more information, see www.prevas.com.

About STULZ GmbH Klimatechnik

Since it was founded in 1947, the STULZ company has evolved into one of the world's leading system suppliers of air-conditioning technology. With the manufacture of precision air-conditioning units and chillers, the sale of air-conditioning and humidification systems and service and object management, this division of the STULZ Group achieved a turnover of around 300 million euros in 2010. Since 1974 the group has seen continual international expansion of its air-conditioning technology business, specializing in A/C for data processing centres and telecommunications installations. STULZ has more than 1,800 employees at five production and sales affiliates (Germany, Italy, USA, China and India) and ten sales companies (in Austria, France, UK, the Netherlands, New Zealand, Poland, Spain, South Africa, Australia and Singapore). Additionally, the company co-operates with sales and service partners in more than 100 other countries, and therefore boasts an international network of air-conditioning specialists. The STULZ Group employs over 4,000 people world-wide. Current turnover lies at around 700 million euros. For more information see, www.stulz.com
